Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Claim 23; Fig 21; 146pp; English.

Purifying recombinant hepatitis C virus (HCV) B1 and B2 envelope proteins - in presence of dissulphide bond cleavage agent, to produce proteins suitable for direct use in vaccines or diagnostic assays of HCV.

and B2 protein coding sequence constructs. These sequences are included in vectors for the production of recombinant B1, B2, and B1/B2 proteins. The recombinant proteins can then be isolated using a method of the invention. In the method, the envelope proteins are purified by carrying out a disulphide bond cleavage, or a reduction step with a disulphide bond cleavage agent, after lysis of recombinant host cells. The constructs containing the purified HCV envelope proteins can be used for vaccinating humans against HCV, for in vitro detection of HCV antibodies in a sample, and in a serotyping assay for detecting one or more BJ AAT12704-T12709 and AAT12961-T12974 represent hepatitis C virus (HCV)

                                                                                                                                                                                         9
serological types of HCV present in a biological sample. The constructs can also be immobilised on a solid substrate and incorporated into a reversed phase hybridisation assay for determining the presence or the genotype of HCV. The new purification method preserves the conformation of the recombinantly expressed E1. E2 and B1/B2, and eliminates contaminating proteins. Antigens isolated using this method are more reactive with human sera than those isolated by known techniques
                                                                                                                                                                                                               1 ATGLCCGGTTGCTCTTTCTTCTTCTCTCTTGGCCCTGCTGTCCTGTCTGACCATACCA

The present invention relates to new therapeutic vaccine compositions for inducing hepatitis C virus (HCW)-specific antibodies, comprising a composition containing at least one purified recombinant HCV single or specific Oligomeric recombinant envelope proteins selected from an B1 and an B2 protein, and optionally a pharmaceutical adjuvant. The vaccines are useful for inducing HCV-specific antibodies or for immunising humans against HCV. The recombinant HCV B1 and/or B2 proteins are useful as vaccines or therapeutics, in HCV screening and confirmatory antibody tests, for raisang antibodies, in htb preparation of medicament, and for in vitro monitoring of HCV disease or prognosing the response to treatment of patients suffering from HCV infection. The present sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           9
                                                                                                                                                                                                                                                                                                                                            The invention comprises an Hepatitis C virus (HCV) vaccine for reducing
             protein;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         liver disease. The vaccine of the invention comprises an HCV El or E2 protein as an antigen. The HCV vaccine is useful for reducing liver disease (e.g. liver fibrosis) in a chronic HCV-infected mammal. The present DNA sequence encodes an HCV El protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Tecerroseaseasecaacreeceerroseaseaseaseceereceasecee

and E2 protein coding sequence constructs. These sequences are included in vectors for the production of recombinant E1, E2, and E1/E2 proteins. The recombinant proteins can then be isolated using a method of the invention. In the method, the envelope proteins are purified by carrying out a disulphide bond cleavage, or a reduction step with a disulphide bond cleavage, or a reduction step with a disulphide constructs containing the purified HV envelope proteins can be used for vaccinating humans against HCV, for in vitro detection of HCV antibodies in a sample, and in a serctyping assay for detecting one or more serological types of HCV present in a biological sample. The constructs can also be immobilised on a solid substrate and incorporated into a reversed phase hybridisation assay for determining the presence or the genetype of HCV. The new purification method preserves the conformation of the recombinantly expressed E1, E2 and E1/E2, and eliminates containating proteins. Antigens isolated using this method are more reactive with human sera than those isolated by known techniques
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Purifying recombinant hepatitis C virus (HCV) El and E2 envelope proteins - in presence of disulphide bond cleavage agent, to produce proteins suitable for direct use in vaccines or diagnostic assays of HCV.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               120

The vaccines are useful for inducing HCV-specific antibodies or for immunishing humans against HCV. The recombinant HCV B1 and/or E2 proteins are useful as vaccines or therapeutics, in HCV screening and confirmatory antibody tests, for raising antibodies, in the preparation of medicament, and for in vitro monitoring of HCV disease or prognosing the response to treatment of patients suffering from HCV infection. The present sequence is a coding sequence described in the exemplification of the invention
                                                                                                                                                                                                                                                                                                           TGCGTTCGGGAGGGCAACTCCTCCCGTTGCTGGCGCGCTCACTCCCACGCTCGCGGCC 240

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      421
                                                                                                                                                                                                                                                                        This sequence is the genome of the non-A, non-B hepatitis virus (NANBHV) strain HC-J4. This sequence was derived by amplification by polymerase chain reaction. The nuclectide sequences derived from this amplification can be used to detect NANBHV infection which could not be detected by conventional methods. The detection kits allow highly specific and sensitive detection at an early phase of infection. The polypeptide product of this coding sequence can be used for the manufacture of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 GGAACGCCAGCGTCCCCCAACAACAATACGACGCCACGTCGATTTGCTCGTTGGGGCTG 301

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      121
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The sequence is that of NANB hepatitis virus polynucleotide N-2540-2 which codes for a non-A, non-B (NANB) hepatitis virus gene HC-OM. The polypeptide it encodes may be used in a system for detecting NANB hepatitis. This method is highly specific and sensitive, and can detect NANB hepatitis virus which could not be detected by conventional methods
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      242 GGAACGCCAGCGTCCCCACAACGACAATACGACGCCACGTCGATTTGCTCGTTGGGGCTG 301

NAN was isolated from the sample and reverse transcribed into CDNA. The 513 amino acids encoded by the CDS were determined but are not given in the specification (and hence are not included in A-Geneseq). A study of the deduced sequence suggested that the CDS encodes NANBH virus core proteins. Primers for detecting NANB hepatitis virus were designed based on the HC-44 sequence. (Updated on 25-MAR-2003 to correct PA field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Oligo-nucleotide primers - derived from and used to detect and diagnose

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The sequences given in AAQ63752-53 represent fragments of the non-A, non B hepatitis virus (NANBHV) genome. These fragments were amplified using the primers given in AAQ63732-51. These primers were used in the detection of NANBH. The primers are based on the S'-terminal region and the core protein coding region. The method allows highly sensitive detection of NANBHO.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Oligonuclectide primer pairs specific for non-A, non-B hepatitis virus used for high sensitivity detection of non-A non-B (NAMB) hepatitis

This sequence represents the 5' region of hepatitis C virus RNA. The original sample was obtained from human and chimpanzee plasma. RNA was isolated from several samples and homology comparted, and the respective sequence of about 1900 - 2500 mucleotides of the 5' terminus and 1100 nucleotides of the 5' region (given) contains a non-coding region of at least 340 nucleotides and a region coding for the structural protein followed by a region coding for protein (none actually detailed on the sequence given in the specification). When compared with the sequence of HCV disclosed in EP-38822 this sequence showed homology of 80.5%. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     CIGCTITICICCCCCTATGTACGTGGGGGATCTCTGCGGGATCTGTTTTCCTCGTCTCCCC 1206

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention relates to GB virus-B. The nucleic acid molecules of the invention are useful for indirectly studying the molecular properties of hepatitis C virus (HCV). HCV/GBV-B chimeras may be used sequence of the GB virus-B clone and the HCV/GBV-B chimeras may be used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New infectious nucleic acids of the GB virus-B clone, useful for indirectly studying the molecular properties of hepatitis C virus (HCV) and in developing vaccines and therapeutics for HCV.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present sequence comprises the nucleic acid sequence of the genome of infectious hepatitis C virus (HCV) genotype 1b strain HC-J4 (ATCC 209596) that is capable of expressing this virus when transfected into cells. HC-J4 was obtained from acute phase plasma of a chimpanzee experimentally infected with serum containing HC-J4/91. The claimed infectious nucleic acid sequence can be used to produce chimeric genomes (see AAX14833) consisting of the open reading frames of infectious nucleic acid sequences of other genotypes (including genotypes 1.6) and subtypes (such sequences of other genotypes (including genotypes 1.6) and subtypes (sea bb, 2a, 2b, 2c, 3a, 4a-f, 5a and 6a) of HCV. The invention also calase to the introduction of mutations or deletions into infectious nucleic acid sequences can actenuated HCV virus suitable for vaccine development. Infectious nucleic acid sequences can also be used to produce attenuated virus via passage in vitro or in vivo of the viruses produced by transfection of a host cell with the infectious nucleic acid sequence. Vaccines comprising one or more polypeptides made from the infectious nucleic acid sequence ace used to infectious mumals, especially humans, against hepatitis C. The nucleic acid sequences can also be used to induce protective immunity against the virus. The nucleic acid sequences or their encoded proteases (e.g. NS) increase) can additionally be used to develop screening assays to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö

The specification describes a nucleic acid comprising a chimeric virus genome, specifically bovine viral diarrhoea virus (BVDV) genome in which the fun-) structural region has been replaced by the (non-) structural region of a hepatitis C virus (HVU) genome. The nucleic acids comprising the chimeric virus and the chimeric virus are useful for identifying cell lines capable of supporting the replication of these chimeric viruses, in creening for neutralizing antibodies to HCV of different genotypes, in the production of HCV-BVDV virious, for the development of inactivated or attenuated vaccines to prevent HCV-BVDV in a mammal, in studying the molecular properties of HCV indirectly in virto, and in identifying inhibitors of viral enzyme activity which would be useful as antiviral agents. Formulations or compositions comprising the chimeric virions may be used to treat or prevent the signs and symptoms of HCV. The present sequence represents a HCV clone, which is used to construct chimeric concerns.

Patent No. 6150134
GENERAL INFORMATION:
APPLICANT: MARRYENS, GERT
APPLICANT: BOSMAN, FONS
APPLICANT: BUYES, MARIE-ANGE
TITLE OF INVENTION: PURIFIED HEPATITIS C VIRUS ENVELOPE
TITLE OF INVENTION: PROTEINS FOR DIAGNOSTIC AND THERAPEUTIC USE
NUMBER OF SEQUENCES: 111
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Indels
